

What's New at arXiv and business as usual

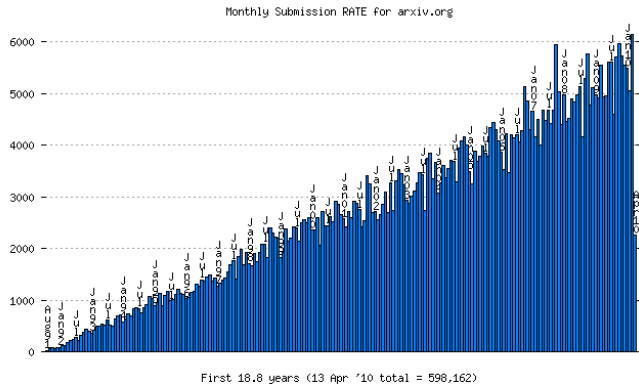

T. Schwander S. Warner

Cornell Information Science
Cornell University

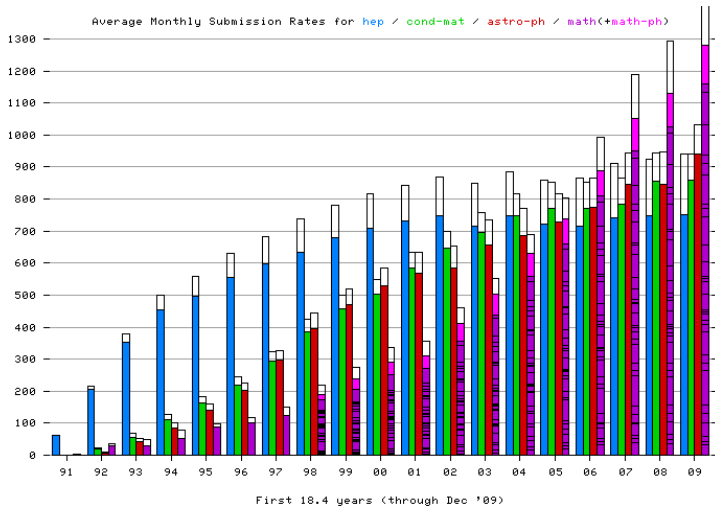

Astronomy, Astrophysics & High Energy Physics Information
Providers Summit IV
Cambridge, MA, 15-16 April 2010

Stats: continuing to grow . . . linearly

- over 600,000 papers by the end of April
 - 500k Oct 2008, 2¹⁹ Feb 2009

submission rate by category

- will LHC lead to a hep revival?

- q-fin
 - launched 2008
 - 30 submissions/month in 2009
 - trending slightly upward in early 2010
- astro-ph split
 - reasonably balanced
 - provides for better targeted daily announcements
 - most popular:
Cosmology and Extragalactic Astrophysics
 - least popular:
Instrumentation and Methods for Astrophysics
Earth and Planetary Astrophysics

Collaborative Support Plan Announced in Jan 2010

- voluntary, collaborative business model
- outreach to heavy institutional users
- arXiv will remain free for readers and submitters
- for 2010:
 - already US\$ 100k received, US\$ 180k pledged total
- intended use: development, feature enhancements, . . .
- general operational cost carried by Cornell University Library

Cornell University Library Engages More Institutions in Supporting arXiv

Collaborative Business Model Changes Funding Structure

ITHACA, N.Y. (Jan. 21, 2010) - In a move to expand support for sustaining arXiv, Cornell University Library is broadening the funding base for the online scientific repository. Nearly 600,000 e-prints - research articles published online in physics, mathematics, statistics, computer science and related disciplines - now reside in arXiv, which is an open information source for hundreds of thousands of scientific researchers.

arXiv will remain free for readers and submitters, but the Library has established a voluntary, collaborative business model to engage institutions that benefit most from arXiv.

"Keeping an open-access resource like arXiv sustainable means not only covering its costs, but also continuing to enhance its value, and that kind of financial commitment is beyond a single institution's resources," said Oya Rieger, Associate University Librarian for Information Technologies. "If a case can be made for any repository being community-supported, arXiv has to be at the top of the list."

The 200 institutions that use arXiv most heavily account for more than 75 percent of institutional downloads. Cornell is asking these institutions for financial support in the form of annual contributions, and most of the top 25 have already committed to helping arXiv.

Institutions that have already pledged support include:

- California Institute of Technology
- University of California, Berkeley
- University of Cambridge (UK)
- CERN - European Organization for Nuclear Research (Switzerland)
- CNRS - Centre National de la Recherche Scientifique (France)
- Columbia University
- DESY - Deutsches Elektronen-Synchrotron (Germany)
- Durham University (UK)
- ETH Zurich - Eidgenössische Technische Hochschule Zürich (Switzerland)
- Fermilab
- Harvard University
- University of Illinois at Urbana-Champaign

Thanks to all institutions who contributed, several of which are represented here today.

New Interactive Submission System

- deployed March 2010
- more convenient for authors
- decouples preparation, preview, and ingestion
 - we still observe jockeying for position, though
- allows for better administrative controls ¹
- overwhelmingly positive feedback

¹increasing use necessitates streamlined operation and continued automation

- **API for search and record access**
`http://arxiv.org/api`
- **SWORD deposit API**
`http://arxiv.org/help/submit_sword`
- **Automatic Classification**
`http://arXiv.org/api/classify`
- **Thesaurus based keyword assignment (soon)**

- introduced 2007
- Facebook and LinkedIn modules provided by arXiv
- interesting uses in 3rd party apps
- continued activity
- plan to add arXiv author-ids to the exposed metadata

- profile of APP
- improves interoperability
- originally intended for batch upload
- CMT and other conference mgmt. systems
 - CIDR 09
- uploads from arXiv proxies: CNRS, VTEX, EPTCS, ...
- individual authoring tools
 - e.g. MS Word plugin (ribbon)

- comparison with existing arXiv papers
- asymmetric KL divergence or TF-IDF cosine distance
- response as Atom feed
- full PDF, plain text fragments, abstracts
- integration with submission system
- anticipated use in SWORD clients

sample response

- author ids start to pick up
- social bookmarking moderately used
- arXiv PDF in the Cloud (Amazon S3)

http://arxiv.org/help/author_identifiers

average weekly use of social bookmarking links:

The screenshot shows the arXiv.org interface for the article "Dark Energy and the New Cosmology" by Michael S. Turner. The page includes a title, author information, a submission date, a short abstract, and a list of comments. On the right side, there are navigation options for downloading the paper in PDF, PostScript, or other formats, as well as a "Current browse context" section showing the article's location within the astro-ph category. There are also sections for "References & Citations" and "Bookmark" links.
